

**Amendments to the Specification:**

Please amend the paragraph in the “BRIEF DESCRIPTION OF THE DRAWINGS” section of the Specification as follows:

~~Fig. 1~~ The figure is a schematic illustration of a vehicle cryo fuel tank system in accordance with an embodiment of the present invention.

Please amend paragraph [0012] as follows:

[0012] The invention ensures that the gases or gas mixtures, which accumulate in the interior 10 of the capsule 12 surrounding cryo fuel tank 14 and which are to some degree dangerous, are removed again and again from the capsule and, in so doing, are further treated in such a manner that there are no problems with respect to the ecology or the environment. As shown in ~~Fig. 1~~ the figure, for example, the gas, exhausted from the intermediate space 10, can pass through vent line 16 to the intake 18 of the vehicle's internal combustion engine 20 to be burned as part of its disposal so that only the resulting exhaust gases, which are then harmless, get through exhaust line 22 into the environment. As an alternative, the exhausted gas for disposal can also be oxidized catalytically and thus rendered harmless, after there is no longer any possibility of this gas igniting in the atmospheric oxygen.
